GLEICHEN, ALBERTA, WEDNESDAY

AUGUST 21, 1935

SUBSCRIPTION \$2.00 PER YEAR

## LARGE TURNOUT WITNESS ALL STAR OLD TIMERS' GAME

Not since Gleichen defeated the Chicago Colored Giants, some years ago, has there been such a large crowd at the local diamond to witness an evening game, as turned out last Friday night to see the All Stars play former members of the Gleichen baseball team, who at one time or another played here previously to 1920. Among the players and the crowd an air of expectancy prevailed before the start of the game. The crowd wondering if the older players with their experience could hold down the dashing, youthful All Stars. The spectators watched with interest as the Old Time players came on the field and greeted each other, some of whom had not met for years. It might be added here that some of these players live as far apart as 90 miles. The game was a little late in starting owing to the late arrival of some of the players. The All Stars were under the management of Geo. Allist while the Old Timers were in charge of their old time manager Jack Bogatie. R. C. Clifford assisted by Wm. Service umpired.

The old Timers went to bat first. Neither team scored in the first but in the second both sides stepped out and made two runs each. For the Old Timers Ralph Burrows and Steve Williams counted when Dr. McIntyre hit the ball a hefty crack. For the All Stars, Bob Brown and Bert James scored when Blair connected. That was the last the All Stars were to score before the game was called. Someville for the Old Timers scored two runs; one in the third and the other in the fifth. Jack McArthur also made a score in the fifth. The Old Timers managed to get to first, second and home in the sixth. The game went six innings and was called in the middle of the first half of the seventh on account of rain, with the score standing 5-2 in the old players favor.

The Old Timers were entertained to a supper at S. Dufas's Coffee Shop after which the evening was spent in telling yarns.

All Stars players: Cook, Blainey, Fox, B. James, B. Brown, Clifford, Blair, H. James and Guinness.

Old Timers: McIntyre, H. J. r.f.; F. Miller, Arrowood, s.a.; Jack McArthur, c.; Ralph Burrows, Countess, 3rd b.; S. Williams, Queenstown, 2nd b.; Geo. Mac Carsland, 1st b.; I. Stinson, Carsland, c.f.; Dr. McIntyre 1.f.; Harry B. H. pitcher; W. Jeffers, B. McArthur, J. Lester, W. Service and Ad. Wilson.

## NOTES OF THE GAME

All the Old Timers showed a lot of ability, especially was this in the infield where they hit a lot of work to do, while those in the outfield made some spectacular catches. Jack McArthur was unusually good behind the bat. Geo. Mac Carsland never made an error and always managed to get the ball in his hands at the right moment. Steve Williams on second, Ralph Burrows on third and F. Miller at short stop seem to be as good as they were in years gone by. There was no doubt about Harry Benton on the mound being as good and baffling as ever. While out in the outfield W. Somerville, I. Stinson and McIntyre caught every fly that struck their hands. The All Stars were also given their toes. Every one of them gave the best they had. That they were defeated means nothing for in another game they may get the breaks and then it will be a different story. If the game had gone the full nine innings the All Stars might have come from behind and won.

Jack Moss, manager of championship hockey teams came all the way from Vegreville to see the game. He thought it was great.

A year ago attempts were made to stage this game but the idea was given up. This year it was postponed several times. Finally, at the urging of the local club preparations were made to stage the game, but all were doubtful that it would be an attraction. Since so many showed that they were interested it will likely become an annual event and made into a real reunion.

The All Stars showed they had the ability to play but they could not make Harry Benton's delivery. On the

## U.F.W.A. PREPARING FOR BAZAAR TO BE HELD THIS FALL

Last Thursday, August 15th, the regular meeting of the Gleichen U. F. W. A. was held at the home of Mrs. Calkins. As there had not been a meeting for nearly a month a record crowd of members and visitors were in attendance.

Mrs. H. Burne occupied the chair but all were very pleased to have our worthy president, Mrs. A. Buckley, with us again. Considerable correspondence had collected but was readily disposed of. More money was voted for the U. F. A. broadcasting fund as all agreed that the necessity was very urgent. Mrs. McEwen reported on the bazaar committee. Lovely pieces of work were distributed to members who are noted for their fine needlework. You will all be anxious to get some of these lovely things at the bazaar this fall. Mrs. Day and Co. presented a short play which all found very amusing. Following this a delicious tea was served.

## LEADER DUGGAN AND CANDIDATE HUGHES ADDRESS MEETING

A Conservative meeting was held in the Community Hall last week, at which W. McConnell presided, D. M. Duggan, provincial Conservative leader, G. M. Blackstock, K.C., of Medicine Hat federal candidate, and F. H. Hughes of Strathmore, provincial candidate for Gleichen constituency spoke. Mr. Blackstock spoke briefly and will return later for the federal campaign. Mr. Hughes elaborated on the Conservative platform of balancing budget, reducing expenses, particularly for governing the province, hall insurance, old age pensions, and government control and distribution of fuel oils, etc. Giving his own record, he stated he had lived in the constituency for 18 years, had six years of experience in the bank and had farmed for several years, but for the past ten years he has been in business in Strathmore.

Mr. Duggan explained his plan of financing the provincial indebtedness at lower rates of interest. Speaking of the various oppositions, particularly the Social Credit and the Liberal parties, he stated definitely that the former was impractical in this province and that the Liberal platform was uncertain, in some points contradictory.

In closing Mr. Duggan stated that he refrained from personalities but that among the Social Credit candidates as well as the Liberal candidates there were some who tried to destroy him and his influence by claiming that one of the reasons why he did not antagonize the U.F.A. was because he was the agent of the government and doing business with the same. He declared that never had the government paid him or his firm one cent as agent and that any business his firm had done with the government was done in competition with others. If their offer was better than any other they got the business, if not, they did not get it.

## SOFTBALL NEWS

The draw for the second round of the provincial playdowns, to be completed this week, is as follows:

Edmonton vs. Wetsakwin British Consols; Calgary Velvets vs. Didsbury Hill-Bills; Gleichen All-stars vs. Meadowbrook; Tuxedo, Calgary vs. Grills, Calgary; Lethbridge, B.C.

The winner of the Gleichen-Meadowbrook series will likely meet Lethbridge next round. The first game is to be played to day at Sunday's game was rained out. Then the next games will follow Friday and Sunday. Come and support the teams as the winning team will need all the money they can get.

B. Boos, of the All-stars, will not be able to pitch for a couple of weeks, as Sunday last, he had the misfortune to have a car door slam on his hand.

Other hand the Old Timers hit Blair heavily and it was through their heavy batting that they were able to score. And while on the subject of pitching we have been informed that it was twenty-five years ago to the day that Harry Benton played his first game in Gleichen.

## DASHES FROM CRAIGANTLER AND DISTRICT

Some garden truck was touched by frost last week, but we do not think it effected the grain.

Roy Sheets made a flying visit to Bashaw accompanied by Mrs. W. Dankworth and Miss H. Dankworth.

Mrs. Will Dankworth of Bashaw, Alta., has moved to Craigantler district and will in future reside on the homestead she left about ten years ago. Mr. Dankworth died last year.

H. B. Grant arrived back from Deer Lodge, Montana, where he accompanied Mr. Moe, one of the members of the company. Mr. Grant had just recovered from being badly kicked by one of his horses, and the trip was very beneficial to him.

Jack Stickle is progressing fine and is expected to be out of the hospital about the end of the week. Jack had his ankle cut with a mower while cutting weeds. The ditch rider and Eddie Collier took him to J. Grant's house and called Dr. Giffen. His father was notified in Calgary and took the message wrong and phoned for Dr. Farquharson. The doctor was out in short notice but found that there had been a doctor called. Jack was ordered to Calgary and was operated on as soon as he got to the hospital. His foot will be in a cast for about six weeks.

## LIBERALS HOLD FINAL MEETING PRESENT CAMPAIGN

A Liberal meeting in the interest of V. Kimpston, Liberal candidate for Gleichen constituency, was held Monday evening in the Community Hall. T. H. Beach occupied the chair. The speakers were V. Kimpston, F. Mayhood and H. Riley.

Mr. Kimpston was the first speaker. Stating he had been a farmer in the Keoma district for many years and understood the problems of the farmer very well. At the present time he is reeve of the Municipal Council of Keoma and had served on the council for several years. In his speech he explained how the provincial debt had increased twice as much while the U. F. A. government was in power. He advocated cutting down the number of members in the legislature and favored a relief program started at once.

F. Mayhood spent sometime explaining why social credit would be unavailable in this province. Showing it was unconstitutional and furthermore would greatly increase taxation. Being a lawyer, Mr. Mayhood spoke from a legal standpoint.

H. Riley who at one time was a member for this riding spoke briefly, dealing mostly with the closing of the agricultural school which he helped to locate here. He criticized Premier, who at that time was Greenfield, who at that time was provincial treasurer, for closing it. Mr. Riley stated that money could be found for other purposes but not to keep the school open.

## SURVEY MADE OF CHEMICAL WEED KILLERS

The sixth of a series of studies dealing with weed research and control has been issued by the Northwest Grain Dealers' Association. This pamphlet deals with chemical weed killers, and is the result of research conducted by Dr. G. P. McRostie, professor of agronomy, University of Manitoba, and Mr. W. Tidesley, M. Sc., assistant on weed research, and financed by line elevator companies. The pamphlet deals with proper chemicals to use in weed destruction. It outlines methods of mixing to avoid burning food and clothing. Manner of spraying, when to apply, and effect on grain yields are set forth. Summarizing the results of the survey, the pamphlet says:

The use of chemical weed killers is only justified where cultivation cannot be properly done, or where it has proven ineffective.

Some annual weeds can be successfully and profitably controlled in growing crops.

The profitable use of chemical for the control of perennial weeds is confined almost entirely to the treatment of winter wheat patches. Fertilizers, properly applied, are a material aid in lessening the weed

## A. C. ROBERTSON REPLIES TO JOHN GLAMBECK

(Continued from last issue)  
The just price includes all legitimate costs of production including insurance, depreciation and a fair profit, and it also includes a levy on each article so priced. This levy goes to the state and is used to pay monthly dividends to the people, thereby providing for those who have been thrown out of employment through the use of modern machinery. If the just price offered is not accepted by manufacturers, there is nothing to prevent the state from renting some of the idle plants and manufacturing our own requirements.

(5) Social Credit proposes to equate production and consumption. That is establish a relation between them so that one will always equal the other. It has already been stated that consumers only get enough money through the regular sources, to buy a fraction of the goods produced. This fraction is approximately two-thirds of the average production. Granting that the distribution of monthly dividends gives them more purchasing power, they may still not be having enough to buy all that is being produced. If, for instance, they can only buy four-fifths of the goods and services that are offered for sale during a period of, say, three months, the state will then order dealers to reduce the price of goods by one-fifth for the next three months, and the state will pay the dealers the one-fifth from the credit that will have accumulated at the state credit house, because one-fifth of the goods available had not been sold during the three months preceding that time. This is called the compensated price and is easily understood when you remember that under the social credit system of finance every dollar worth of goods or services create a dollar's worth of credit and this dollar's worth of credit is never destroyed until the goods or services are in the hands of a consumer. This compensating feature automatically adjusts any difference there may be in production and consumption and prevents stagnation of industry.

Social Credit is at least constructive. It starts by taking stock of our assets, and figures out how they can best be used for the benefit of the people to whom they belong. It proposes to put a new and sufficient financial foundation under our economic system and make such changes in that system as may be necessary to enable it to take care of every citizen of the province. It denotes means of doing this and it treats everybody alike. The new financial system being the base will control our economic system and it will not be dependent on the present capitalistic system for its existence. No, Mr. Glambeck, social credit will not have to work inside of capitalism but capitalism will have to co-operate with Social Credit if it wants to live in the same province. It is much easier to overthrow it, and by the way it is more chaotic.

In the letter to which we referred at the commencement of this one Mr. Glambeck seemed to feel quite sorry that social creditors are more or less insane. Without wishing to infer that he is a little queer, too I am reminded of an inmate at a mental hospital that I once heard about.

He was looking through the fence one day and saw a man going by with a load of manure. He asked the man what he was going to do with the manure and the man said he was going to put it on his strawberries. The inmate said: "You are crazy if you put that stuff on your berries. Come on in with us. We get cream and sugar on ours."

Now, it seems to me that a man who has failed to enlighten himself on the principles of social credit and their possible application, cannot logically call those insane who have done so. The man with the load of manure is as crazy as a certain individual thought he was, and it is quite possible that social creditors are not as insane as Mr. Glambeck thinks they are.

A. C. ROBERTSON.

# "SALATA" TEA

## Nature Upsets Man's Plans

Harvest time in Western Canada has again arrived and for the most few weeks great activity, from early morning till late at night, will be the rule right across these western plains. Following several years of short crops, and in many sections complete failure of crops due to drought, and consequently lack of resources on the part of tens of thousands of farmers to seed and harvest a crop this year, governments and municipalities, banks, mortgage, loan and implement companies made provision whereby farmers were supplied with seed, fertilizer, gas and oil, machinery repairs, binder twine, and other cereals to the seedling and harvesting of a crop. Each individual farmer may not have received all that he desired, but, speaking broadly, the needs of the situation were fairly well met.

Taking the country as a whole, and excepting certain more or less restricted areas, copious rains have fallen throughout the growing season, following a somewhat late seeding. Up to a few weeks ago prospects for at least a normal, if not above normal crop, were bright. Grasshoppers and cut worms which were at first threatened, seemed to have been brought under control, weather conditions prevailing being a main factor to that end. Prospects for a fairly large and satisfactory crop were excellent, and estimates of as high as 350,000,000 to 400,000,000 bushels of wheat were commonly made.

But last month the bright picture became clouded as rust made its appearance in the wheat fields, coming in from the southeast and spreading rapidly westward and northward. Governments, financial concerns, economic planners, farmers, every human agency is powerless against the development of Nature. For years technical agricultural experts, chemists and scientists employed by Governments have been seeking a means to offset the ravages of rust and to develop a strain of wheat that will be rust-resistant. But Nature this year has defied all their efforts, and it is now self-evident that Western farmers will sustain heavy losses through the effect of rusted crops.

Estimates of the loss through rust already run as high as 100,000,000 bushels of wheat; some estimates are even higher, and, of course, the actual loss will not be known until the harvest is completed. On many farms, even in some municipalities, no wheat will be harvested.

There is no desire to be alarmist in reviewing this situation. Notwithstanding the inroads by rust upon what a few weeks ago was one of the most promising crops in many years, the general agricultural situation is decidedly better than for some years past. Grass again covers great areas of the West which recently presented a desolate appearance. Feed and fodder formerly lacking is now available. Garden crops are generally reported to be good. But the big cash crop of the West, wheat, will be smaller and of decidedly less value than was hoped for and expected a few weeks ago.

The whole country must face this unfortunate fact and meet it to the best of its ability. No human agency can be held responsible for the losses sustained. It is beyond Governments, corporations and individuals alike to prevent. All will be included in the losses sustained—Governments through loss of revenues and the necessity of providing assistance where it was not anticipated it would be necessary; railways through loss of traffic and therefore loss of revenues; railway, elevator, machine company and other employees, including farm laborers, through less employment; financial concerns to whom money for advances made is owing but which cannot be paid as fully as was anticipated; farmers more especially because the returns for their year's labor are swept away or very largely reduced. In a word, no existing political, financial, economic, or social system is responsible for the heavy losses the country is sustaining. Nature and conditions developed under its inscrutable laws are the sole cause.

But Nature is not always unkind. In the long run it always strikes a fair balance. Its laws operate not for one year, but throughout cycles of years. Man must not only recognize this truth, but govern himself accordingly. There is no good end to be served by becoming dependent and discouraged. There is only one courageous thing to do, and that is to face the situation and the present. Loose to-day will be compensated for by gains to-morrow. That is a law of Nature. Therefore, the future should be faced with courage and determination. Life is a battle and must be fought. Man could not exist on "flowery beds of ease." If he is to succeed and reach the topmost rungs of the ladder of life, he must exert himself and climb, battling against all obstructions in his way, eradicating the seeds that cling to his feet, removing weaknesses and strengthening the ladder. Climbing he will become stronger; crouching at the foot of the ladder, waiting for somebody to carry him up, he will become flabby and weak and eventually succumb. Courage and determination, which will bring confidence, is essential to success in any walk of life. And in the long run Nature will not bar the way, rather it will be found helpful and co-operating.

## Wood Ready For Use

Germany Has Treatment To Season Trees While Growing

Telegraph poles, railway ties and other heavy wood necessities may be grown to order by a treatment which has just been discovered in Germany. Trees are made to season themselves so that when felled their wood is ready for immediate use. A bore hole is made in the tree trunk, and a special chemical solution containing arsenic and other salts is injected into the living tree. These chemicals enter the sap stream of the tree, and are gradually carried to the ends of the highest branches. The tree does not survive the treatment very long, but as it dies it becomes thoroughly saturated with preservative and can be used on railroads or for telegraphs and telephones without any of the usual treatment.

## Serves Double Purpose

Balloon Which Turns Into Parachute Tested Near Moscow

A "parachute balloon," designed to change its form in the air and to descend as a parachute, has made its first experimental flight from the field of the government dirigible factory near Moscow. The pilot, Modestoff and Liscif, were ordered to ascend 10,000 feet, then to open the valve, permitting the gas to escape. The underpart of the bag is designed to fold upward in such a manner the bag gradually takes the form of a parachute.

Keep cast-iron work in good condition by rubbing with blacklead.

Beer was made by the Egyptians 5,000 years ago.

## Trying For New Record

Speed Of 300 M.P.H. Is Sir Malcolm Campbell's Aim

A circus of record breaking under the boiling sun on Utah's salt desert, planned as the greatest show in the history of automobile speed racing, is the September aim of Sir Malcolm Campbell and Captain George Eyston, Britain's swiftest drivers.

The speed kings announced their plans to sail together, Sir Malcolm to shoot again at his dream of 300 miles an hour in the veteran Bluebird; Eyston to tackle every mark between that one and 24 hours.

Filled with glowing accounts of the Bonneville salt flats surface by his friend, John Cobb, who recently set 21 new records there, Campbell is confident that old Lady Bluebird, the six-ton thunder wagon that roared to the present land speed record of 275.16 on the sands of Daytona Beach last winter, finally will carry him this time over a mile in 12 seconds flat—300 miles an hour.

"I'm sure I'll beat 300 this time," Campbell said. "Then I'll chuck the record and stick to business."

The 50-year-old Englishman who has no challenger to-day for speed over a measured mile has made a few alterations in the Bluebird since his return from Florida.

Captain Eyston, who in the past nine years has set 200 records, more than any other living man, will alternate record tries with Campbell. Eyston will drive a fearsome looking front-drive juggernaut, powered with a 400-horsepower Rolls Royce aviation engine. His tanks carry 40 gallons of gasoline, giving it a 400-mile range without refueling. Eyston believes he can average 160 miles an hour or higher for 24 hours and is bringing Albert Denly along to drive relief.

## Fingerprints By Radio

Experiments Have Shown Great Improvement In Results Obtained

Transmission of fingerprints by radio is the latest link between science and criminal detection—a link that is being more strongly forged by Scotland Yard every day.

Experiments were begun several months ago. At first they were regarded as an every day practical business, considerable improvement has recently been made in the results obtained.

At first the images were blurred, even when sent from enlarged prints, but greater technical experience is gradually overcoming this drawback. The time is very near when in urgent cases portable apparatus will be used to transmit fingerprints direct from the scene of the crime to Scotland Yard records, it was predicted.

As the technique of wired and radio transmission improves, it will be possible to send life-size fingerprint photographs speedily over any distance, police believe. Scotland Yard rapidly turns new scientific inventions to its own use in the fight against criminals. The present head of the fact, the investigating department, Lord Trenchard, has had much to do with the reorganization plans.

## Demand For Homespun

Women in Quebec Are Kept Busy Filling Orders

Spinning wheels and hand looms in the district around Murray Bay, Quebec, are kept busy as the housewives try to fill demands of the fashionable world for homespun fabrics.

For years Murray Bay has been famous as the home of homespun. Its fine, soft blankets and candlewick spreads have been carried away by tourists to far parts of Canada, the United States and Europe. This year there are still the blankets, spreads and bedded rugs, but the rage is for homespun fabrics, from which suits and skirts, sport jackets and coats are being made.

Much of the charm of the new fabrics is in their natural coloring and weave. Colors are from natural vegetable dyes, the habitant women making the fabrics from beginning to end.

Though women are doing most of the buying of habitant homespuns, men are also using them for sports wear.

"Son," wrote a busy father, "emulate Benjamin Franklin, who said, 'To learn the value of money, borrow it.'"

In due time the boy at college replied: "Dear Dad, I did as you suggested. Borrowed \$50 from my roommate. What do I do next?"

More than two dozen species of orchids grow wild in the regions around Chicago.

## Power Of Sun Rays

Amount Of Sunburn In Sunlight Measured By Machine

Government scientists of the United States have successfully tested a machine which measures the amount of sunburn in sunlight.

Dr. W. W. Coblentz, internationally famous radiation expert of the National Bureau of Standards, has perfected the machine which measures the ultraviolet rays of sunlight which cause sunburn and tanning. The machine is known technically as a portable prevision ultraviolet ray meter.

Ultraviolet rays comprise less than a thousandth of the total radiation coming from the sun, Dr. Coblentz said. Yet these particular rays are strong enough to scorch the skin with only several hours exposure during the summer months. The rays also are used in treating rickets.

Tests have been made at Washington and San Juan, Puerto Rico. Both are approximately at sea level and relatively free from smoke and dust. Dr. Coblentz pointed out that altitude and flying particles were factors in measuring solar radiation.

The "tanning" rays were somewhat stronger at San Juan than in Washington at the same comparative altitudes. This conforms with other radiation studies made in the tropics which show that the sun, being directly overhead, has to send its light through less ozone in the atmosphere. Experts estimate that the sunlight reaching Washington has to travel through approximately five per cent. more atmosphere than at San Juan, thus absorbing more ultraviolet rays.

Other tests performed at Flagstaff, Ariz., showed less ozone in the afternoon than in the morning and thereafter a greater atmospheric transparency. Autumn was found to be more transparent than the spring experiments found.

Fog takes its share of the ultraviolet rays out of the sunlight and there is less possibility of tanning when humidity is high, it was found.

Physicians are interested in the device because of the curative power of ultraviolet rays in cases of rickets, which is practically unknown in the tropics.

The present machine screens out the ultraviolet or "tanning" rays in the sunlight and measures them quantitatively with the aid of a photo-electric cell.

## See Market in Britain

Opportunity For Export Of Tuberculin-Free Cattle From Canada

Prevalence of bovine tuberculosis in Great Britain provides a great opportunity for Canadian cattle-breeders to develop a large market for tuberculin-free cattle, Dr. Arthur Stephens, member of the British Medical Association touring party, said at Toronto yesterday.

"Sixty per cent of cattle in Great Britain show tuberculin in tests," Dr. Stephens stated. "Canada's development in recent years has shown this to be the fact. In the United States, because of opinion in Great Britain is strongly in favor of tuberculin-free herds, I believe a wonderful opportunity exists to benefit both Canadian cattle-breeders and the British people."

## A Modern Samson

Native Of India Earns Nickname With His Feats

N. K. Modi of Dumka, Bihar, India, has earned for himself—with good reason—the nickname of "Samson." Here are some of the feats he has recently accomplished:

Killed a tiger single-handed, armed only with a stick;

Killed a buffalo by twisting its horns till its neck broke;

Put to flight by himself, a gang of 40 bandits. Saved the life of his servant, who fell down a well. He was just in time to catch the man's left ankle with one hand as he disappeared over the edge, and he hauled him back with ease into safety.

## Surplus Dairy Nations

New Zealand, Australia, Denmark, Netherlands, Canada, Italy, and Switzerland appear to be the world surplus dairy nations. The United Kingdom is the world's greatest importer of dairy products, supplied by Germany in the past, but by the United States, Germany, and Belgium in cheese, and by a number of nations in condensed and evaporated milk.

The human eye responds to wave lengths of light from those 387 ten-millionths of an inch long, which give a sensation of violet, to those 268 ten-millionths of an inch long, which give a sensation of red.

## FASHION FANCIES

**RAGLAN SLEEVED SWAGGER**  
COAT FOR SMART AL-  
OCCASION DAYTIME  
WEAR

By Ellen Worth

Here's a simple to sew swagger coat that finds an important place in every smart wardrobe.

To-day's pattern also provides for seven-eighths length as seen in the small back view.

Lightweight wool in vivid coloring as emerald green, red, purple, etc., is very smart over dark sheer frocks.

White, navy, or pastel linens are enchantingly lovely for town or resort wear. It's made at a very moderate cost. Style No. 312 is designed for sizes 14, 16, 18 and 20 years. Size 18 requires 2½ yards of 54-inch material with 2½ yards of stretch lining.

Patterns 15¢ each. Address mail orders to: Pattern Department, Winnipeg Newspaper Union, 175 McDermott Ave. E., Winnipeg.

Summer Fashion Book contains many more smart, cool vacation clothes. Send for your copy to-day, the price is 15¢.

## Will Await Conference

Britain Has Not Yet Decided On Naval Program

Sir Bolton Eyles-Monell, first lord of the admiralty, told the House of Commons Britain's naval building program could not be determined "until the results of a naval conference and programs of other powers are known."

Referring specifically to a published report that Britain plans to build a new \$750,000,000 battle fleet by 1942, he said: "No attention need be paid to unofficial and irresponsible statements."

Britain, he added, has advanced a hypothetical program to the United States, Germany, France and others.

## Money As A Healer

Dr. N. Zanes, a leading physician in Vienna, Austria, says money is the best healer of wounds and superior to all ointments. He has treated several thousand cases with money, and has not had a single failure. It soothes pain, hastens healing and acts as an anesthetic, he declares. It is also highly effective with burns and carbuncles.

Rattlesnakes add from two to three "rattles" annually, and sometimes four.

Four hundred years are required by nature to build one inch of top soil, according to recent estimates.

## The King's Reach

Section Of Thames Named In Honor Of Jubilee

The river Thames, so far as it runs through the metropolitan district of London, is divided into a series of sections called "reaches." There is Chelsea Reach, Blackwall Reach, Greenwich Reach, Gallions Reach and so on, but one section appeared to have escaped being named, a deficiency which has just been rectified in honor of the King's silver jubilee. This is the stretch between the Pool of London, so familiar in pictures, just west of the Tower Bridge, and Lambeth Reach, which terminates at the Houses of Parliament side of Westminster Bridge. The Port of London Authority has decided to call it "The King's Reach."

Once upon a time the Thames was more used as the King's Highway than the road itself between Westminster and the Tower of London, the royal residence, St. James Palace being at one end while His Majesty often had business at the Tower—sometimes very dirty business at that. So that "The King's Reach" is an appropriate name for this important waterway. It includes London Bridge, Southwark Bridge, Blackfriars Bridge, Waterloo Bridge to Westminster, and on the shoreline are such noted places as Billingsgate Fish Market, Cannon street railway station, St. Paul's Cathedral, Victoria Embankment, including Cleopatra's Needle, Somerset House, where wills are filed and all the births, deaths and marriages in England are registered, Charing Cross and Scotland Yard.

So it you may happen to be in Old London and lean over the parapet somewhere between the Houses of Parliament and the Tower looking at what John Burns calls "liquid history," that part is "The King's Reach."—St. Thomas Times-Journal.

## Gave Address On Slang

Professor Of English Says It Is Language On Trial

At the spring meeting of Yorkshire Dialect Society held at Wilberforce House, J. H. Grafton, Professor of English language and philology in Liverpool University gave an address on slang, cant, and jargon. He said it was impossible to acquire a thorough knowledge of English without being familiar with slang and vulgarisms. Slang was a language of the street, but no word or expression had any real meaning outside its context and the situation in which it occurred. Cant was originally the secret language of the under-world, and he decried jargon as language unintelligible out of its proper sphere. Consideration would show the absurdity of condemning slang unheard. What he really wanted was more knowledge about the passing of certain slang into general slang. Words which were started as slang had risen in value and become an essential part of our colloquial of literary vocabulary.

## New Tower Telescope

A new solar tower telescope, the first of its kind in England and the only large astronomical telescope in the world with optical parts made entirely of fused quartz, has been commissioned at the observatory in Oxford, England.

The liver in a human body is about seven times as large as necessary for the work the organ does.

## The Highways of Buying

"Follow the highway markings and you can't go wrong." That's the advice the Automobile Club gives you before starting on a motor trip. You follow the well-known, well-marked roads. And you reach your destination the safest, most comfortable way.

Why not follow the same rule in your shopping? Why not stick to the "highways of buying?" They have been just as carefully plotted, and are just as carefully marked as the motor roads you've come to depend upon. Marked by the trade-marks of reliable, advertised products.

The next time you go shopping follow these "highways." Pick out the products you want. Notice the names and trade-marks that identify them. And ask for them by name.

The advertisements are sign posts to guide you to the best and the most reliable goods.

## Town & District

Harvesting began last week on many farms through the district.

Mrs. Chas. Thompson, has as her guest this week, Mrs. E. Hersen, her sister.

Mr. and Mrs. T. Krause and family are in the country west of Olds picking berries.

Miss A. Hunter is spending a holiday at L'Ange. She made the trip there on horseback.

Jack Moss and son of Vegreville, are holidaying here. They are the guests of Mr. and Mrs. Geo. Allard.

K. R. McLean, Sight Specialist of Calgary, will be at Dr. Farquharson's office Monday morning, Aug. 28 up to 1 p.m.

Mrs. Lockyear of Regina and Mrs. Johnson of Edmonton were recent visitors to Gleichen visiting their parents Mr. and Mrs. A. E. Jones.

Mr. and Mrs. W. L. Woodcliffe and daughter Joyce, of Strathmore, were guests at the home of Mr. and Mrs. Earl Eberhard.

The Gleichen Troop Girl Guides wish to take this opportunity of expressing their appreciation to those whose kind co-operation made their annual camp an enjoyable and successful affair.

Mrs. R. E. House who has been visiting at Duchess for the past week returned to Gleichen Sunday evening and was later taken to her home south of Arrowwood by Laurie Brown.

On Monday evening last, Mrs. C. Thompson, Mrs. Verna Thompson, Miss Lillian Bishop, Mr. Bruce Gilbert and Mr. C. Bishop were guests of Mrs. Harry Scott and her daughter Laura, at a delightful chicken dinner.

On Friday evening last St. Andrew's Young People and a few of their friends gathered together in the Guide Hall, for a social evening. Dancing in the form of circle two steps, broom tags, and ladies choices, was most popular, and games contests, gave variety to the entertainment.

After a most enjoyable and satisfying supper, a few of those present entertained with songs, tap dancing, etc. The highlight of the evening was the sing-song just before "Home Sweet Home."

Owing to the bad hail storm on the 17th July (which destroyed so many gardens in town the committee of the Board of Trade in charge of the garden competition for 1935, have decided to postpone the competition this year. The cup presented by the Canadian Bank of Commerce will be put up for competition in 1936.

The Gleichen mountain is no more. This mound of earth has lain beside the arena ever since the rink was built, having been piled there when the floor of the arena was leveled off. The hill had been a great eyesore to all and sundry. Taxpayers kicked about it and wondered why it was ever piled up there. But like all things the problem finally solved itself. A number of the streets of the town needed building up as the wind and rain had carried away the crown of the road. This mountain would fix that, so thought Jack Lester, town engineer. With a crew of men he started into the mountain with alacrity, shoveling it into dump wagons, hauled it away and dumped it on the streets and now the streets look much better. But even the big hill could not supply enough earth to build up the streets so more had to be brought from the great pile of drifted soil at the west end of town. And where the mountain was Oscar will likely have a dandy garden next year.

Albert Cutter of the Blackfoot Indian reserve, was apprehended on Saturday morning at 6 a.m. by Corporal Ashby and the Indian scout at the residence of Boy Chief, near the Arrowwood bridge. Evading the police for days in hiding he was finally brought to justice. He was charged with the stealing of an overcoat from Mrs. Tom Hinkley and pawning same in Medicine Hat; stealing a horse and saddle and pawning same in Calgary; breaking into the Cluny Garage. Following a regular epidemic of break-ins on the reservation, the same were finally traced to Albert Cutter. Corp. Ashby prosecuted, while two Justices of the Peace tried the offender, Wm. McConnell and J. E. Ostrander. Albert Cutter was found guilty and sentenced to jail for two years less one day, on each charge running concurrently. Albert Cutter is a Blackfoot Indian but some how does not seem to fit in with his red brothers very well and it has for sometime been thought that the other Indians are more or less afraid of him or at least find him very strange. Corporal Ashby conducted Albert to his new home Saturday.

ST. ANDREW'S ANGLICAN There will be no Bible Class at 10 a.m., as the service at 7:30 will be Young People's. Mr. Jas. A. McCracken will address the Young People in this service.

## THE RAIDING COCKROACH

Cockroaches are adventurous foragers and are no respecters of architecture. They swarm anywhere they choose, or advance in single scouting units, into apartment houses, hotels, private dwelling houses, barns or stores. The kind of building makes no difference provided the conditions are moist and warm and there is a plentiful supply of food. Cockroaches have been a nuisance all over Canada this summer, and evidently tired of the comparative freedom of municipal garbage dumps are taking refuge in cracks and crevices in the walls of nearby dwelling houses. They hide during the day and emerge at night in search of food. They eat anything eatable, but are particularly fond of the foodstuffs favored by man. On this account they are usually most numerous about kitchens and pantries and other places where food is recessed. Cockroaches may be readily controlled by means of sodium fluoride, which can be bought from any drug store at a nominal price. This material should be lightly dusted in places frequented by the roaches, such as about sinks, baseboards, cupboards, hot water pipes and so on. The sodium adheres to the legs of the insects and in cleaning themselves they are poisoned. As sodium fluoride is somewhat poisonous to human beings, reasonable precautions should be taken, says the pamphlet on cockroaches, issued by Dominion Department of Agriculture, to prevent children or domestic pets from gaining access to it.

SHE WAS SENTENCED TO MARRY THE MAN SHE LOVED "LADY BY CHOICE"

Carole Lombard, May Robson Roger Pryor and Walter Connolly

EVENING SHOWS 7:30 and 9 P.M. GLEICHEN COMMUNITY HALL

"Three Removes are as Good as a Fire" That gem from the philosophy of Benjamin Franklin comes in the form of a three-removes fire extinguisher. It is a "three-removes" fire extinguisher. It is a "three-removes" fire extinguisher. It is a "three-removes" fire extinguisher.

## CLASSIFIED ADS

Notice under this heading 15 words or under 50c. First insertion and 25c. each subsequent insertion 1 week, \$1.00. Over 15 words one cent per word for each insertion.

STEAM ENGINE WANTED—Any one who has a steam engine they wish to sell cheap, advise Standard Coal Mine, giving price wanted and where it may be seen. J. Castella, Standard, Alta.

SCOOTER FOR SALE—in first class shape. This scooter will cut cost any other scooter in town. Apply Elliott Evans.
